a Same cells, two questions
Upstroke-to-downstroke ratio
AP width
Max number of APs
Afterhyperpolarization
AP amplitude
Input resistance
Rebound
Membrane time constant
Latency @ +20pA current
AP amplitude adaptation index
Burstiness
Sag area
Rheobase
Sag time
ISI coefficient of variation
Sag ratio
Resting membrane potential
Spike frequency adaptation
Rebound number of APs
Afterdepolarization
ISI adaptation index
Wildness
ISI Fano factor
AP amplitude average adaptation index
ISI average adaptation index
AP threshold
Latency
AP Fano factor
AP coefficient of variation
